600 kHz Phased Array DVL

## Small in Size— Big on Performance

Teledyne RD Instruments' new **Pathfinder DVL** is precisely what our customers have been waiting for! This new highly compact 600 kHz DVL is small in size and *huge* on value. Derived from Teledyne RD Instruments' long-standing, highly reliable DVL technology, this system promises to deliver the precision navigation performance you've come to expect from Teledyne RDI, at a price point, size, and weight that's ideally suited for your next application.

Utilizing Teledyne RDI's proven **state-of-the-art electronics**, the Pathfinder DVL provides an array of advanced internal algorithms and features you'd typically expect to find only in higher-end solutions. With up to 150 m of bottom tracking, in up to 300 m of water, the Pathfinder 600 delivers a solid, value-priced solution for vehicles ranging from small inspection class ROVs to large diameter AUVs.

Utilizing Teledyne RDI's **proven bottom-detection** algorithms and single-ping bottom-location accuracy with its broadband velocity processing technology, the Pathfinder provides users with **highly reliable** precision velocity data for navigation and position control, even over indeterminate terrain.

The Pathfinder DVL is available off-the-shelf in a self-contained or OEM configuration, providing you with a footprint and flexibility that's right for your unique vehicle requirements.
